

Withdrawing Teams from a Division

If a team has withdrawn from the league, it may be removed from the division, preserving the scorecards for the clubs involved. The league table will be adjusted but you will need to manually adjust the number of teams in the division set up. (*To remove a team but leave performances intact for league averages see page 7.*)

The process is illustrated below.

Here is a sample division table in the administration view before the team has been withdrawn.

'Removing' a team but leaving performances intact for league averages.

Some leagues require performances to be left linked to the league site when a team withdraws from a division. In this case the existing functionality isn't appropriate as the games already played are turned into friendlies, as are any outstanding fixtures.

There are two workarounds for this:

1. Set up a custom draw on the Draw results tab for that division, and assign 0 points to each side for that.
You would then have to go through all the withdrawing team's league games for this season and set the result to that option (and remove any bonus and penalty points from both teams). If you wish to, you can use the 'Aggregate Results' tab to combine result that with one of the existing 'No result' options so that you don't get an extra column for that division. You will also need to use that option for the rest of their games for the season so that the number of games played by each team is equal.
2. The alternative would be to concede all of the withdrawing team's games which would have the same net effect but obviously generates much higher points totals for the other teams.

There is a Notes field in the Division Set Up tab that you can use to advise viewers of the situation regarding the league table.
